

The graph displays the relationship between Drain-Source Voltage (V_{DS}) and Drain Current (I_D) for a MOSFET. The x-axis represents V_{DS} in Volts (V), ranging from 0 to 60. The y-axis represents I_D in milliamperes (mA), ranging from 0 to 10. The curves are plotted for various Gate-Source Voltages (V_{GS}), labeled as 0.0 V, -2.0 V, -4.0 V, -6.0 V, -8.0 V, -10.0 V, -12.0 V, -14.0 V, and -16.0 V. The curves show that the drain current increases with V_{DS} and is higher for more negative V_{GS} values.
