

The graph displays the characteristic curves of a p-type MOSFET. The x-axis is the Drain-Source Voltage (V_{DS}) in Volts, ranging from 0 to 60. The y-axis is the Drain-Source Current (I_{DS}) in microamperes (μA), ranging from 0 to 1000. The curves are plotted for gate-source voltages (V_{GS}) of 0.0 V, -2.0 V, -4.0 V, -6.0 V, -8.0 V, -10.0 V, -12.0 V, -14.0 V, and -16.0 V. The curves show that I_{DS} increases with V_{DS} and is higher for more negative V_{GS} values.
